

Shot-blasting Equipment

EQUIPMENT AVAILABLE FOR HIRE OR PURCHASE

DESCRIPTION

Whitfield Minerals and Aquacrete have been operating in Metalliferous mines since 1984 and Coal since 1997 and we have over these years continually improved and refined our methods of installation. Through modifications to machines, hoses and nozzles we have developed a system of installing Aquacrete products with very little down time due to equipment failure.

SHOTBLASTING MACHINES

Meyco Piccola Spray Machines and Aliva Spray Machines

These machines are for processing dry mix product which works according to the rotor principle. They require little maintenance and are very easy to operate.

Whitfield Minerals can provide a service to refurbish wear pads which will provide clients with excellent cost savings.

Spare parts are readily available and can be ordered through Whitfield Minerals.

Other machines are available please contact us to discuss your requirements.

HOSES AND NOZZLES

FRAS rated delivery hoses can be supplied. Whitfield Minerals have a FRAS rated nozzle which has been specifically designed for shot blasting the Aquacrete Product. This specifically designed nozzle has proven to be the most effective way to install Aquacrete products.
